

An Aircraft Maintenance Service Provider Make Used of ZKTeco Access Control Solution in their Branch Office in Sharjah Airport Free Zone

Customer:

Volga-Dnepr Gulf is a maintenance service provider for Russian-built aircraft that has a branch office in Sharjah and Fujairah, U.A.E.. The company is focusing its efforts on developing its expertise and competence in the maintenance of western-built aircraft.

Project Requirement

Volga-Dnepr has its own hanger for airplane service and maintenance. Everyday, many staff from all the companies which they provide their service need to access the main gate all the time especially during the maintenance period. The client is using a manual security system by writing the name of the staff and visitors passing by, time, date, and signature.

Products Used

- SBT1022S
- TS2122
- ZKBioSecurity 3.0

Solution

The client used 1 unit of TS2122 on the entrance and 1 unit of SBT1022S for the exit. The turnstile and swing barrier serve as a protection of the staff within the area. Using fingerprint for Volga-Dnepr staffs and RFID card for all the visitors, all the information can be stored into ZKBioSecurity 3.0 software to control and monitor the flow of people.

Using a manual security system to control more than 1000 visitors each month, the client cannot manage informations of staff, and new and returning visitors. With ZKBioSecurity 3.0's Staff Access Control System and Visitor Management System, the job is made simpler in just using a fingerprint and RFID card. What more is that they will have a record of every staff and visitor who pass by the main entrance and can protect and access the informations any time.
